## NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

## → MEDIKONDA PREM CHAND

21BCE9593

▼ Import NumPy as np

```
import numpy as np
```

▼ Create an array of 10 zeros

```
arr = np.zeros(10)
print(arr)

[0. 0. 0. 0. 0. 0. 0. 0. 0. 0.]
```

▼ Create an array of 10 ones

```
arr = np.ones(10)
print(arr)

[1. 1. 1. 1. 1. 1. 1. 1. 1. 1.]
```

▼ Create an array of 10 fives

```
arr = np.full((1,10), 5)
print(arr)
[[5 5 5 5 5 5 5 5 5 5]]
```

▼ Create an array of the integers from 10 to 50

▼ Create an array of all the even integers from 10 to 50

```
arr = np.arange(10, 51, 2)
print(arr)

[10 12 14 16 18 20 22 24 26 28 30 32 34 36 38 40 42 44 46 48 50]
```

▼ Create a 3x3 matrix with values ranging from 0 to 8

```
arr = np.arange(0, 9). reshape(3, 3)
print(arr)

[[0 1 2]
      [3 4 5]
      [6 7 8]]
```

▼ Create a 3x3 identity matrix

```
arr = np.identity(3)
print(arr)

[[1. 0. 0.]
       [0. 1. 0.]
       [0. 0. 1.]]
```

▼ Use NumPy to generate a random number between 0 and 1

```
arr = np.random.uniform(0,1)
print(arr)
     0.16799073716697166
```

▼ Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

Create the following matrix:

```
arr = np.arange(1,101).reshape(10,10)/100
print(arr)
```

```
[[0.01 0.02 0.03 0.04 0.05 0.06 0.07 0.08 0.09 0.1 ]
[0.11 0.12 0.13 0.14 0.15 0.16 0.17 0.18 0.19 0.2 ]
[0.21 0.22 0.23 0.24 0.25 0.26 0.27 0.28 0.29 0.3 ]
[0.31 0.32 0.33 0.34 0.35 0.36 0.37 0.38 0.39 0.4 ]
[0.41 0.42 0.43 0.44 0.45 0.46 0.47 0.48 0.49 0.5 ]
[0.51 0.52 0.53 0.54 0.55 0.56 0.57 0.58 0.59 0.6 ]
[0.61 0.62 0.63 0.64 0.65 0.66 0.67 0.68 0.69 0.7 ]
[0.71 0.72 0.73 0.74 0.75 0.76 0.77 0.78 0.79 0.8 ]
[0.81 0.82 0.83 0.84 0.85 0.86 0.87 0.88 0.89 0.9 ]
[0.91 0.92 0.93 0.94 0.95 0.96 0.97 0.98 0.99 1. ]]
```

▼ Create an array of 20 linearly spaced points between 0 and 1:

## Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
mat[2:, 1:]
     array([[12, 13, 14, 15],
            [17, 18, 19, 20],
            [22, 23, 24, 25]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
mat[3,4]
     20
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
mat[:3,1:2]
     array([[ 2],
            [7],
            [12]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
mat[4, :]
```

```
array([21, 22, 23, 24, 25])

# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE

mat[3:5,:]
    array([[16, 17, 18, 19, 20],
        [21, 22, 23, 24, 25]])
```

▼ Now do the following

```
mat.sum()
325
```

▼ Get the standard deviation of the values in mat

```
mat.std()
7.211102550927978
```

▼ Get the sum of all the columns in mat

```
mat.sum(axis = 0)
array([55, 60, 65, 70, 75])
```
